# Color Palette

Tenax Solutions' palette is designed to convey confidence, clarity, and trust. Deep charcoal creates a premium, security-focused foundation, while Signal Orange adds energy, vigilance, and action. Signal Deep provides an accessibility-focused variation for light backgrounds, maintaining the brand's orange while improving contrast. Clean white and confident blue complete the modern, technology-driven system.

**Signal Orange** is the primary brand orange for fills, major accents, brand moments, and text on Command Black. It is approved for bold headings 24px or larger on light backgrounds. For smaller text, links, and icons, use Signal Deep.

**Signal Deep** is for text, links, small icons, and borders on light backgrounds where additional contrast is needed. It should not replace Signal Orange for fills or primary brand moments.

# Primary Logo

The primary logo is the cornerstone of the Tenax Solutions brand identity and should be used whenever space allows. Combining the signature icon with the full wordmark, it delivers maximum brand recognition while communicating confidence, professionalism, and technical expertise. This version represents the brand in its most complete form and is the preferred choice across digital, print, and marketing materials.

**Best Used For**

- Website headers and landing pages
- Sales collateral, proposals, and presentations
- Tradeshow displays and corporate signage

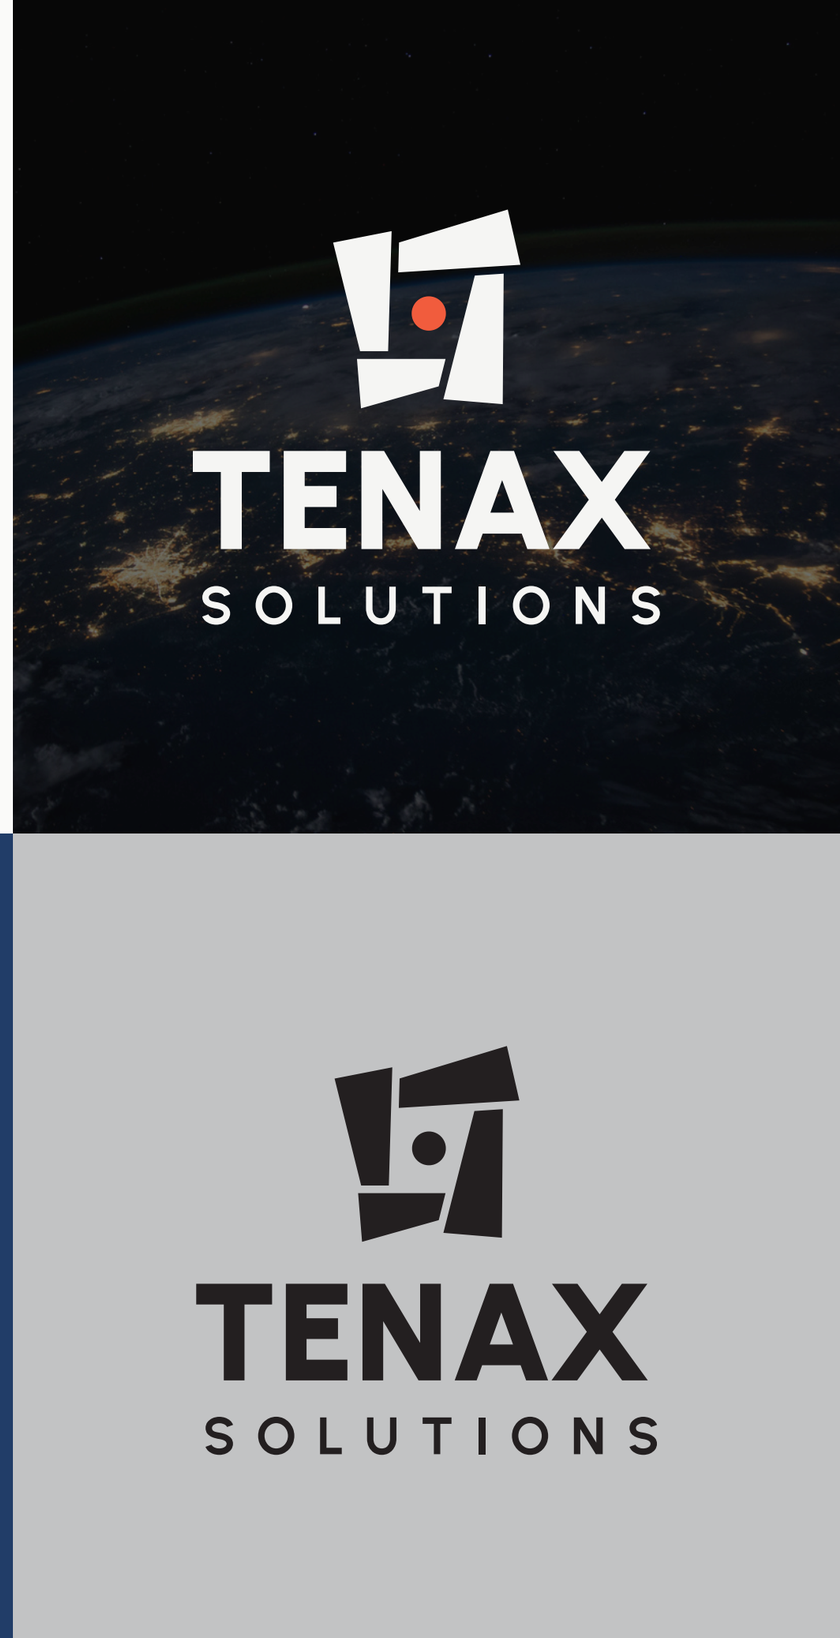

# Secondary Logo

The secondary logo provides a flexible alternative for layouts where a more compact or stacked configuration is needed. It maintains the same visual integrity and recognizability as the primary logo while adapting seamlessly to narrower formats and vertical applications. Use this variation when the primary logo cannot be accommodated without compromising readability or balance.

**Best Used For**

- Social media graphics and digital advertisements
- Email signatures and branded documents
- Vertical layouts and narrow-format print materials

# Submark

The submark is a simplified version of the Tenax Solutions identity designed for applications where space is limited but brand recognition remains important. It offers a clean, refined presence for items such as website headers, presentations, merchandise, and supporting brand assets. While more compact than the primary logo, the submark maintains a strong visual connection to the overall identity.

**Best Used For**

- Website footers and section dividers
- Company merchandise and promotional products
- Internal documents and presentation templates

# Icon

The Tenax icon is the most distilled expression of the brand, representing Tenax Solutions through its distinctive symbol alone. Ideal for favicons, social media profiles, app icons, and other small-scale applications, the icon remains recognizable even at reduced sizes. Its bold, modern design reinforces the brand's focus on innovation, protection, and forward-thinking technology while providing maximum versatility across digital experiences.

**Best Used For**

- Website favicon and browser tabs
- Social media profile images
- Mobile app icons and software interfaces

# Primary Typography

Urbanist is the primary display typeface for Tenax Solutions, chosen for its clean geometry and confident presence. Its modern design creates strong, impactful headlines that reflect the brand's innovation, precision, and forward-thinking approach. Whether used in marketing materials, presentations, or digital experiences, Urbanist establishes a bold first impression while maintaining exceptional readability.

**Recommended For**

- Page titles and hero headlines
- Section headings and callouts
- Marketing campaigns and display graphics

# Secondary Typography

Sora serves as the primary body typeface, bringing clarity and approachability to every message. Its contemporary design and excellent legibility make it ideal for longer-form content, ensuring information is easy to read across both print and digital applications. Sora complements Urbanist by adding warmth and accessibility, reinforcing Tenax Solutions' position as a knowledgeable technology partner that communicates with confidence and clarity.

**Recommended For**

- Body copy and paragraphs
- Website navigation, forms, and UI elements
- Reports, proposals, and long-form documentation

# Imagery

Tenax Solutions' imagery combines technology, architecture, data, and authentic collaboration to communicate confidence and capability. Visuals should emphasize innovation, resilience, and proactive security rather than reactive problem-solving, showcasing environments and people working with purpose. Abstract technology elements and modern infrastructure reinforce the brand's expertise while maintaining a polished, premium aesthetic. Every image should support the message that Tenax is a trusted partner helping organizations stay ahead of evolving threats.
